

Overtime Hours Monitoring Report

Functional Requirement Specification

1. Purpose

The purpose of the **Overtime Hours Monitoring Report** is to provide HR and management with a consolidated view of employee overtime hours by comparing the employee's **qualifying working hours** against the applicable minimum working-hour requirement.

The report will consider employee attendance, late arrivals, leave, public holidays, working on public holiday, leave in lieu, short leave, and no-pay leave when determining the employee's qualifying working hours.

Any qualifying working hours exceeding the applicable minimum working-hour threshold will be identified as **Overtime (OT) Hours**.

The report should provide sufficient detail for HR users to understand and audit how the final OT hours have been calculated.

2. Scope

The report should support the following:

- Calculation of employee qualifying working hours.
 - Calculation of monthly minimum working hours.
 - Calculation of OT hours.
 - Adjustment of minimum working hours based on No-Pay Leave.
 - Deduction of applicable late minutes.
 - Consideration of attendance punch-in and punch-out records.
 - Consideration of full-day and half-day leave.
 - Consideration of short leave.
 - Consideration of public holidays.
 - Consideration of employees working on public holidays.
 - Handling of Leave in Lieu for public holiday work.
 - Filtering by date range.
 - Filtering by employee number.
 - Filtering by department.
-

3. Report Filters

The report should provide the following filters:

Filter	Description
Date From	Starting date of the reporting period
Date To	Ending date of the reporting period
Employee Number	Allows the user to generate the report for a specific employee
Department	Allows the user to generate the report by department

4. Standard Minimum Working Hours

The standard minimum working hours for an employee is defined as:

30 days × 6 hours = 180 hours per month

Therefore, under normal circumstances:

Minimum Working Hours = 180 hours

The employee's total qualifying working hours will be compared against this minimum.

OT Calculation

OT Hours = Total Qualifying Working Hours – Applicable Minimum Working Hours

If the resulting OT value is negative, the report should display:

OT Hours = 0

5. Daily Working-Hour Calculation

The system should determine the employee's daily qualifying working hours based on the applicable attendance, leave, and holiday conditions.

The calculation should first identify the type/status of the day and then apply the relevant business rule.

Possible day types include:

- Normal Working Day
 - Public Holiday
 - Public Holiday Worked
 - Half-Day Leave
 - Full-Day Leave
 - Short Leave
 - Leave in Lieu
 - No-Pay Leave
-

6. Normal Working Day

Where an employee works on a normal working day and has valid punch-in and punch-out records, the actual worked hours should be calculated based on the attendance records.

Actual Worked Hours = Punch-Out Time – Punch-In Time

Where the employee has reported late, the applicable late minutes should also be considered. Also, if the punch in time is earlier than the shift start time, it should always round off to the shift start time.

Late Arrival Calculation

The employee's actual punch-in time should be compared against the applicable shift start time.

Late Minutes = Actual Punch-In Time – Shift Start Time

The late minutes should then be deducted from the calculated working hours.

Example

Scheduled Start: 08:00

Punch In: 08:30

Punch Out: 17:00

Actual Worked Hours:

$17:00 - 08:30 = 8.5$ hours

Late Minutes:

$08:30 - 08:00 = 0.5$ hours

The adjusted value of **8.5 hours** will be used as the employee's qualifying working hours for the day.

7. Public Holiday – Employee Does Not Work

Where the date is identified as a public holiday and the employee does not work on that day, the employee should receive:

8 qualifying working hours

Therefore:

Public Holiday Hours = 8 hours

The 8 hours should be included in the employee's total qualifying working hours.

8. Half-Day Leave

Where an employee applies for half-day leave, the qualifying working hours should consist of:

Adjusted Actual Worked Hours + 4 Hours

The adjusted actual worked hours should consider late minutes where applicable.

Example

Scheduled Start: 08:00

Punch In: 08:30

Punch Out: 12:30

Actual Worked Hours:

$12:30 - 08:30 = 4 \text{ hours}$

Late Minutes:

30 minutes

Adjusted Worked Hours:

$4.5 - 0.5 = 4 \text{ hours}$

Half-Day Leave:

4 hours

Total Qualifying Hours:

$4 + 4 = \mathbf{8 \text{ hours}}$

9. Full-Day Leave

Where an employee has an approved full-day leave, the qualifying working hours should be:

8 hours

Therefore:

Full-Day Leave Hours = 8 hours

The full-day leave should contribute 8 qualifying hours to the employee's total working hours.

10. Short Leave

Where an employee applies for short leave, the qualifying working hours should consist of:

Adjusted Actual Worked Hours + Actual Short Leave Hours

The employee's monthly short-leave entitlement is **1.5 hours**.

The entitlement may be consumed:

- In 30-minute increments; or
- As the full 1.5 hours at once.

The report should use the actual short-leave duration recorded against the employee.

Example – 30-Minute Short Leave

Actual Worked Hours = 7.5 hours

Short Leave = 0.5 hours

Qualifying Hours = 7.5 + 0.5 = **8 hours**

Example – 1.5-Hour Short Leave

Actual Worked Hours = 6.5 hours

Short Leave = 1.5 hours

Qualifying Hours = 6.5 + 1.5 = **8 hours**

Where late arrival also applies, the late-minute deduction should be applied to the actual worked hours before adding the short-leave hours.

11. Employee Works on a Public Holiday

Where an employee works on a public holiday, the qualifying working hours should consist of:

Adjusted Actual Worked Hours + 8 Public Holiday Hours

The actual worked hours should be calculated from the employee's punch-in and punch-out records and adjusted for applicable late minutes.

Example

Actual Worked Hours = 8 hours

Late Minutes = 30 minutes

Adjusted Worked Hours:

$8 - 0.5 = 7.5$ hours

Public Holiday Hours:

8 hours

Total Qualifying Hours:

$7.5 + 8 = \mathbf{15.5 \text{ hours}}$

The additional 8 public holiday hours should be retained as part of the qualifying working hours.

12. Public Holiday Worked + Leave in Lieu

Where an employee works on a public holiday and subsequently receives/takes Leave in Lieu, the additional 8 hours initially associated with the public holiday should be transferred to the Leave in Lieu date.

The system should ensure that the additional 8 hours are **not counted twice**.

Process

1. Employee works on a public holiday.
2. The system initially calculates:
 - o Adjusted Actual Worked Hours; plus
 - o 8 Public Holiday Hours.
3. Once the Leave in Lieu is applicable, applied and approved, the additional 8 hours should be removed from the original public holiday date.
4. The 8 hours should then be added to the Leave in Lieu date.

Example

Public Holiday:

Actual Worked Hours = 8 hours

Public Holiday Allocation = 8 hours

Initial qualifying hours:

$8 + 8 = \mathbf{16 \text{ hours}}$

After Leave in Lieu is granted/taken:

Public Holiday date:

$16 - 8 = \mathbf{8 \text{ hours}}$

Leave in Lieu date:

Applicable Qualifying Hours + 8 hours

This ensures that the public holiday benefit is transferred rather than duplicated.

13. No-Pay Leave

No-Pay Leave (NPL) should reduce the applicable minimum working-hour requirement.

The standard calculation is:

$\mathbf{30 \text{ days} \times 6 \text{ hours} = 180 \text{ hours}}$

For employees with No-Pay Leave:

$\mathbf{\text{Applicable Minimum Hours} = (30 - \text{NPL Days}) \times 6}$

Example

Employee has 4 days of No-Pay Leave:

$$30 - 4 = 26 \text{ days}$$

Therefore:

$$26 \times 6 = \mathbf{156 \text{ hours}}$$

The employee's applicable minimum working-hour requirement will therefore be **156 hours** instead of 180 hours.

If the employee has 172 qualifying working hours:

$$172 - 156 = \mathbf{16 \text{ OT hours}}$$

Therefore:

$$\mathbf{OT \text{ Hours} = 16}$$

14. Business Rule Summary

Scenario	Qualifying Hours
Normal working day	Adjusted actual worked hours
Normal working day + late arrival	Actual worked hours – late minutes
Public holiday, not worked	8 hours
Half-day leave	Adjusted actual worked hours + 4 hours
Full-day leave	8 hours
Short leave	Adjusted actual worked hours + actual short-leave hours
Public holiday worked	Adjusted actual worked hours + 8 hours
Public holiday + Leave in Lieu	Remove additional 8 hours from PH and add 8 hours to LIL date
No-Pay Leave	Reduces applicable minimum hours by 6 hours per NPL day

Scenario	Qualifying Hours
Standard minimum	180 hours
NPL-adjusted minimum	$(30 - \text{NPL Days}) \times 6$
OT	Total Qualifying Hours – Applicable Minimum Hours
Negative OT	Display as 0

15. Proposed Summary Report Columns

The following columns are recommended for the main report:

Employee Information

Column	Description
Employee Number	Unique employee identifier
Employee Name	Employee name
Department	Employee department
Designation	Employee designation, if required
Date	Date
Shift	Shift name
Actual in time	Actual in time
Actual out time	Actual out time

Attendance / Leave Summary

Column	Description
Normal Working Hours	Qualifying hours from normal working days
Public Holiday Hours	Qualifying hours from public holidays
Public Holiday Worked Hours	Actual qualifying hours from public holiday work

Column	Description
Half-Day Leave Hours	Qualifying hours associated with half-day leave
Full-Day Leave Hours	Qualifying hours associated with full-day leave
Short Leave Hours	Qualifying short-leave hours
Leave in Lieu Hours	Hours transferred to Leave in Lieu date
No-Pay Leave Days	Number of NPL days
Late Minutes	Total applicable late minutes

Final OT Calculation

Column	Description
Total Qualifying Working Hours	Total hours after all applicable calculations
Standard Minimum Hours	Standard 6-hour threshold
NPL	0 hours
OT Hours	Qualifying hours less applicable minimum
